See what moved. Keep the history.

Your MakerWorld creator workspace, at home on the Mac.

Local observations. Clear comparisons. More time for making.

Make the next check useful.

Move from changing totals to a repeatable creator workflow.

01

Observe

Keep local snapshots of your profile and watched models.

02

Compare

Separate the latest successful check from the growth in your chosen window.

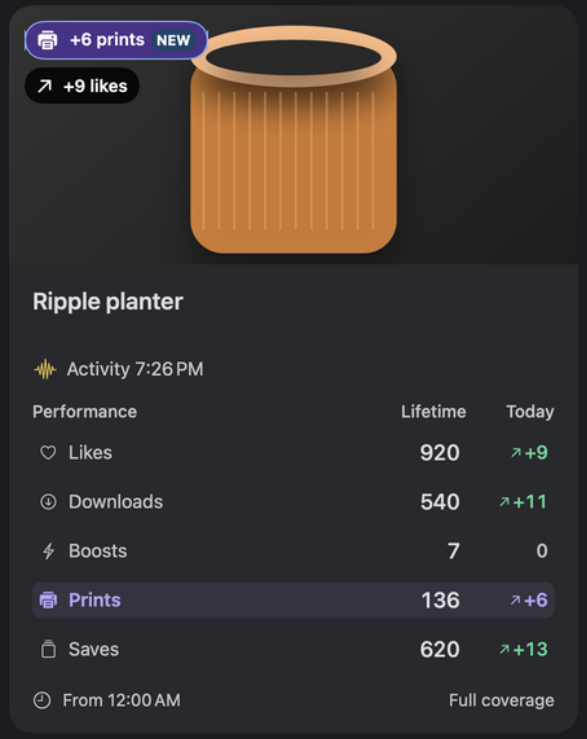

03

Prioritize

Bring actual model changes to the front, then return to making.

Profile totals and some reports overlap with MakerWorld. MakerGlance brings local history, monitoring choices and native desktop actions together.

Put print growth in the spotlight.

Two useful signals.

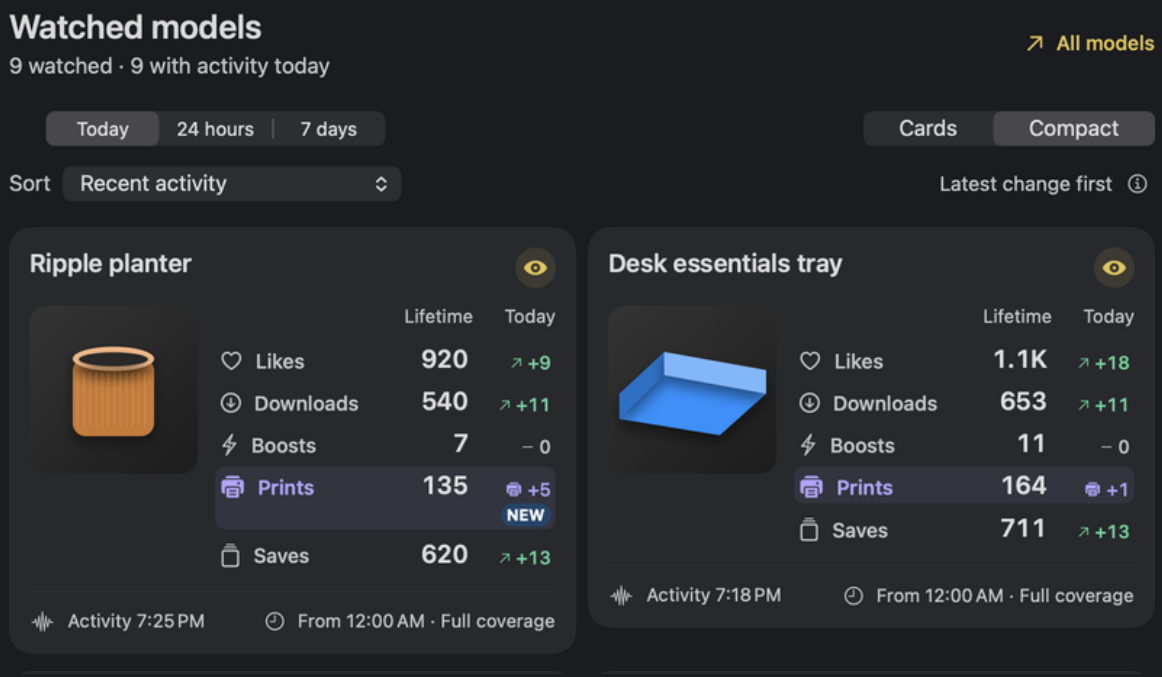

PRINTS

The selected window's print increase. A printer symbol and signed value reinforce the color.

NEW

An increase in the latest successful comparable check. The period total remains separate.

One watchlist. Two ways to see it.

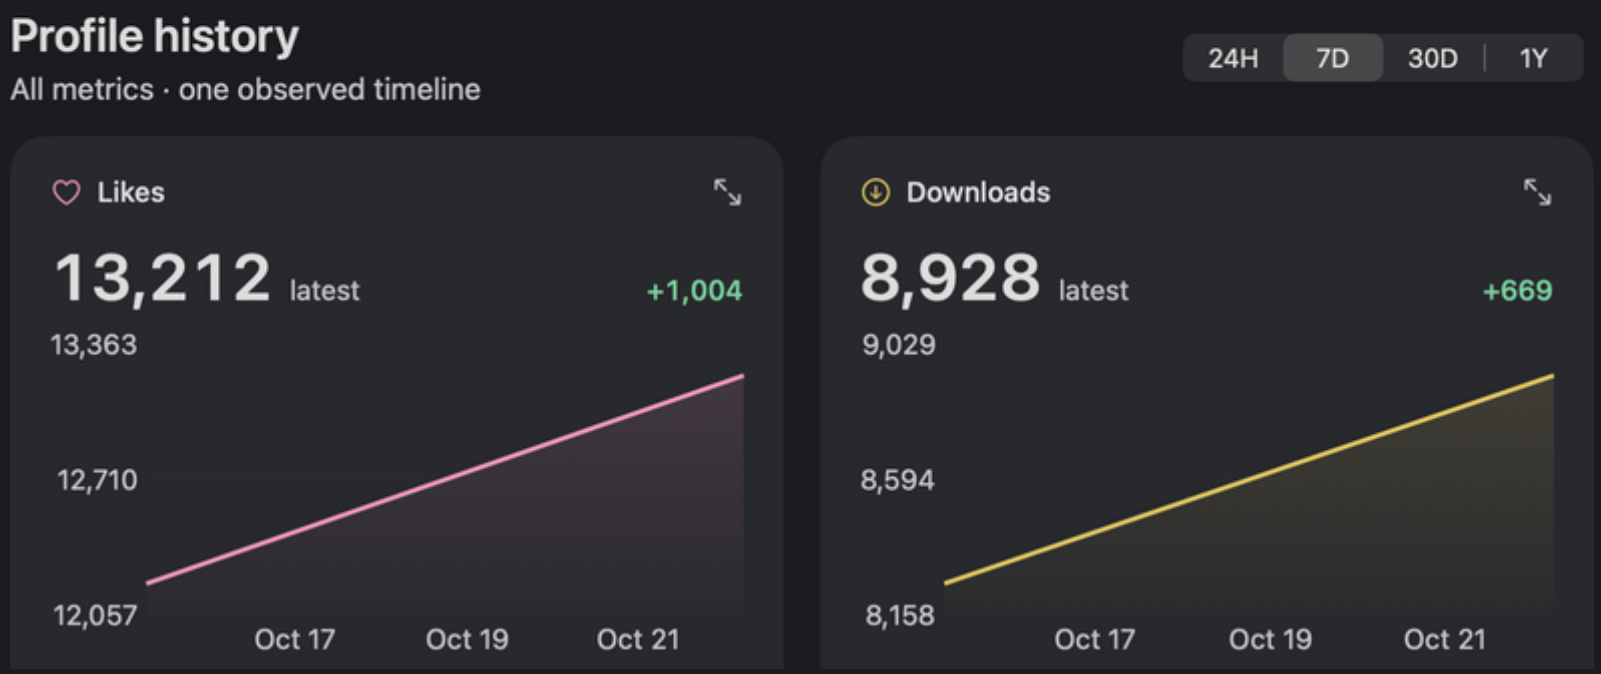

Same observations. Your preferred density.

Sort by prints, saves, boosts, downloads or likes. Choose lifetime totals or gains in your selected window.

Cards or Compact. All observations preserved.

Same observations, selection and activity order. Persistent view choice. Text size from 85–150%.

Your observations become a timeline.

Today

Local calendar midnight to midnight, with explicit observation coverage.

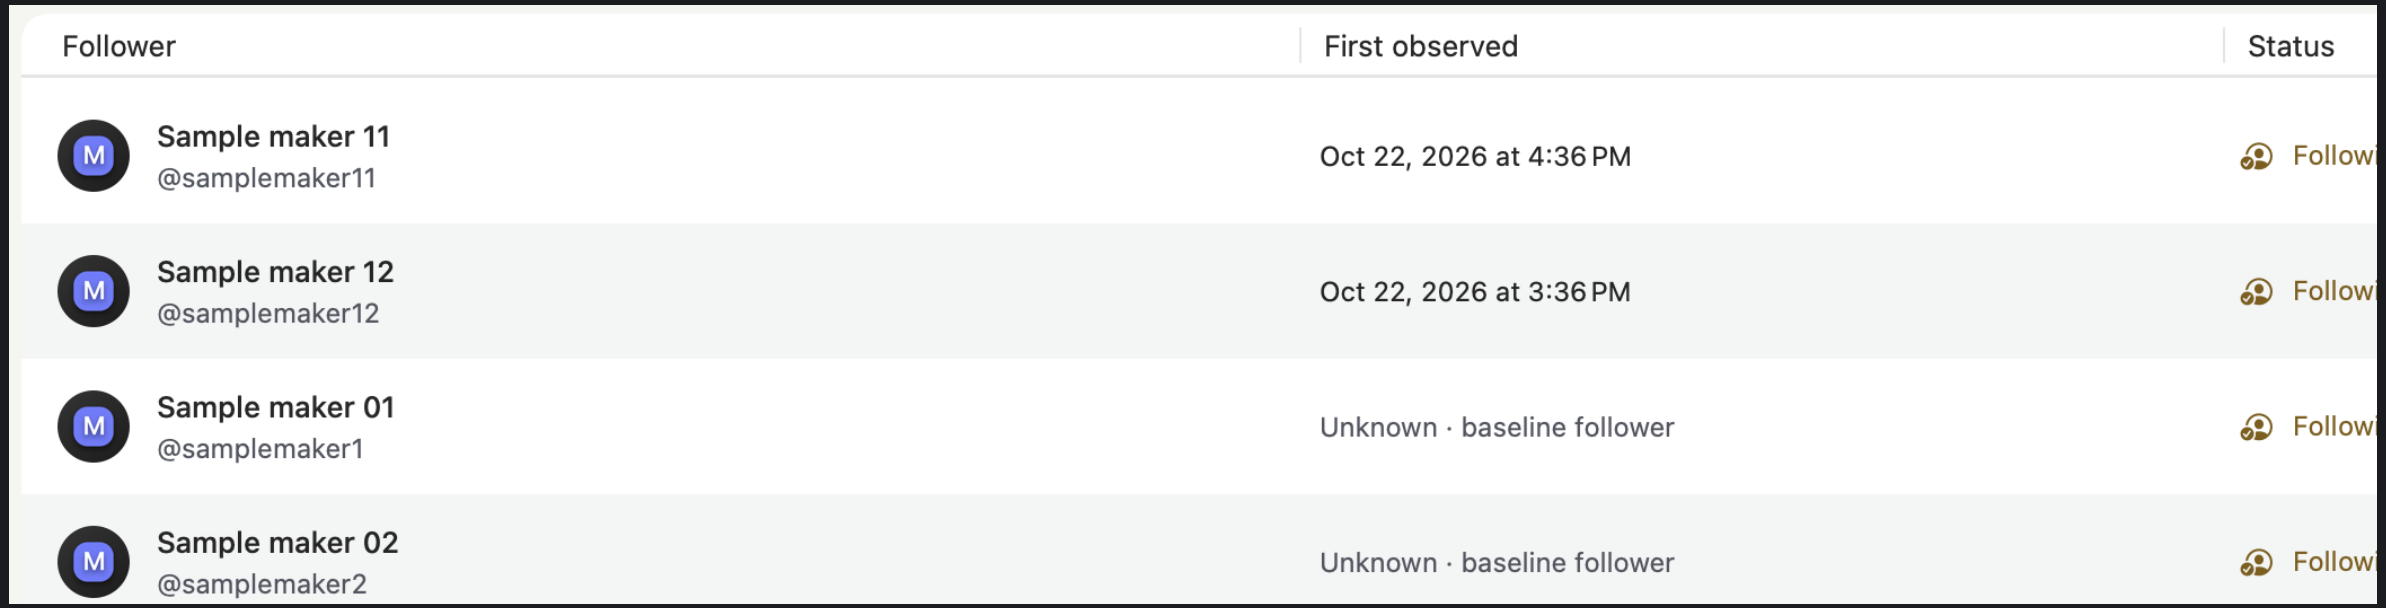

Rolling windows

24 hours and 7 days show observed changes in the selected period.

Server reports

Available Creator Center reports keep their UTC dates separate.

Remember first seen. Keep dates honest.

Baseline

Existing follower dates stay unknown.

First observed

New accounts get a local observation time.

Search & sort

Bring order to the community list.

First observed is never presented as the original follow-relationship date.

Your studio, a menu-bar click away.

Scan unread activity

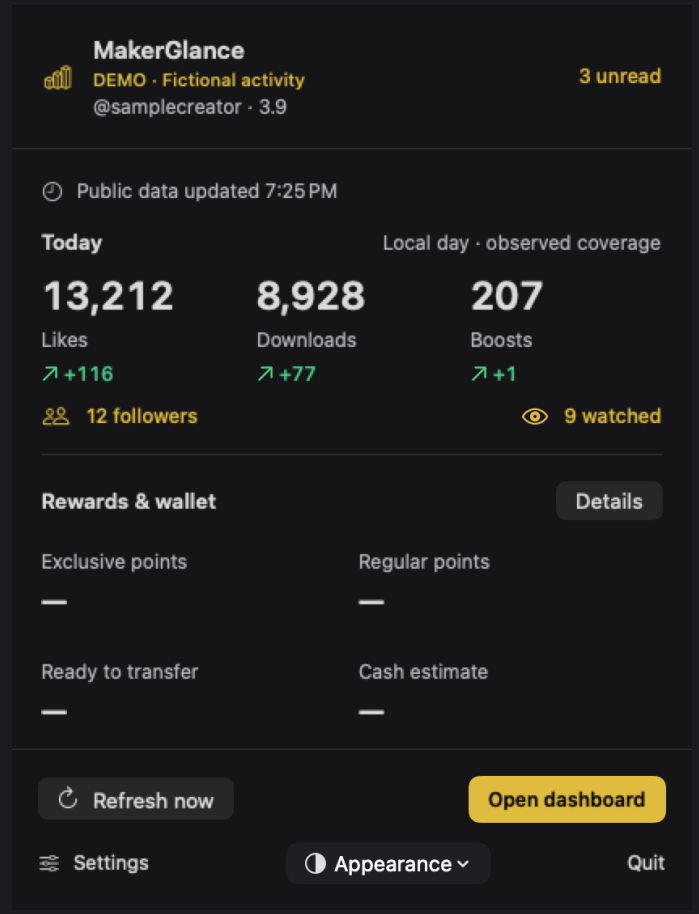

See Today changes and recent updates.

Jump back into a model

Refresh, open details or return to the dashboard.

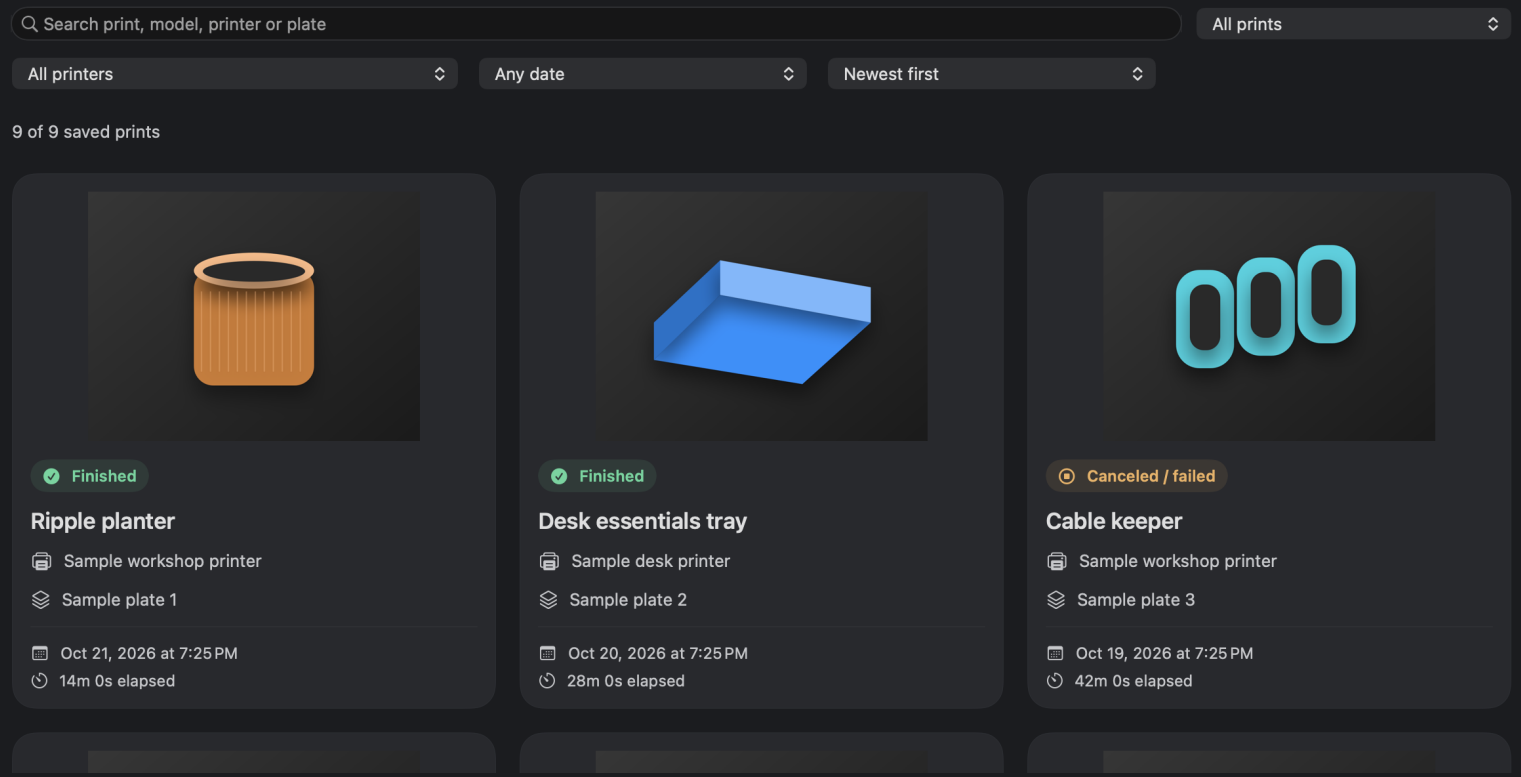

Keep the window closed

Monitoring continues while the app is running.

Local notifications need macOS permission. Quitting or sleeping pauses checks.

Your own prints. A useful history.

Find the job.

Search and filter your private cloud history by model, printer, plate, status or date.

Keep the facts clear.

Recorded elapsed time stays separate from slice estimates.

Read-only, account-scoped local history. Cloud coverage varies; this is not live printer telemetry or public model print totals.

Local data. Clear boundaries.

History on your Mac

SQLite observations and preferences. The app does not encrypt the database.

Sessions in Keychain

User-initiated sign-in, creator validation and no saved password.

Read-only monitoring

No redemption, withdrawal, transfer or server-message-read actions.

Undocumented services

Availability and schemas can change. Missing data and reasons stay explicit.

Independent, unofficial companion. Not affiliated with or endorsed by Bambu Lab or MakerWorld.

Build your creator workspace.

Native macOS. One focused view of what you observed.

```
swift test
bash scripts/build.sh
open dist/MakerGlance.app
```

MakerGlance
